

Aashish Shenoy

(301)433-1648 | aashenoy@gmail.com | <https://www.linkedin.com/in/aashishshenoy/>

Strategic Engineering Leader, adept at scaling global Finance/SaaS organizations. Expert in cloud data architecture, governance, and risk. Leverages empathetic, customer-focused leadership and technical craft to drive operational excellence and measurable business impact.

Experience

Salesforce

Engineering Manager | Feb 2025 – Present | New York, NY

- **Strategic Transition & Resilience:** Successfully led the acquired product engineering team through corporate harmonization, maintaining high team morale and engagement through a high-ambiguity transition period.
- **Operational Excellence & Security:** Spearheaded the design and launch of a centralized Admin Console, eliminating direct "Hands-In-Production" access for customer configurations, reducing operational risk and overhead across the entire acquired product suite.
- **Infrastructure Modernization:** Drove critical infrastructure migrations, transitioning complex single-machine workloads to Kubernetes clusters to eliminate Single Points of Failure (SPOF) and ensure system reliability and scale under new corporate standards.
- **Hands-On Innovation:** Led technical innovation efforts, including the hands-on prototyping of a dynamic data extraction load management strategy designed to improve ServiceNow backup throughput by 3x, demonstrating sustained engineering agility.
- **Corporate Integration & Future Readiness:** Championed the rapid adoption of Salesforce's development methodologies (Scrum, GUS, Eng360, V2MOM) and the Service Ownership model. Steered AI and Agentic upskilling (Cursor, Gemini, Agent Force) to future-proof the team and align with target platforms.

Own Data Company (Acquired by Salesforce)

Engineering Manager | Apr 2024 – Jan 2025 | Englewood Cliffs, NJ

- **Product Leadership & P&L Impact:** Directed the engineering function for the "Recover for ServiceNow" product. Oversaw a 100%+ increase in ARR (from \$1.9M to \$4M) and grew the customer base by over 50%+ (45 to 70 clients), adding Enterprise customers.
- **Innovation & Cost Efficiency:** Championed and delivered two key product innovations: a patented data fragmentation technique that improved backup performance by 300% and the introduction of synthetic backups, which reduced the cost to serve by 75%.
- **Technical & Strategic Oversight:** Served as the hands-on technical leader and product architect for the team (10 engineers across NJ and Hyderabad). Provided architectural oversight, deep technical guidance, and actively engaged with executive leadership (VP, CTO) to set long-term product strategy and engineering roadmaps.
- **Team & Delivery Management:** Managed distributed R&D teams, automating the delivery pipeline to ensure rapid, consistent deployment of enhancements. Accelerated engineering velocity by proactively addressing technical debt and organizational blockers.

Goldman Sachs

VP, Engineering Manager | Feb 2013 – Apr 2024 | New York, NY

- **Executive Leadership & Scale:** Led a global engineering organization of 30+ technologists and managers across New York, Dallas, and Bangalore. Oversaw compute and personnel budgets and drove organizational structure and performance strategy.
- **Organizational Growth & Technical Strategy:** Organically scaled a 4-person pod (2019) into a large, multi-disciplinary engineering function, directing strategy across the stack, and assuming responsibility for Data Modeling, Cloud Infrastructure, and Observability.
- **Governance & Risk Management:** Provided executive technical governance and architectural direction from ideation through continuous delivery. Established rigorous SDLC and SRE protocols, maintaining ownership of Technology Risk, Regulatory Compliance, and Business Continuity and Disaster Recovery planning.
- **Critical Platform Ownership:** Held functional ownership for enterprise data platforms, leading the technical design and delivery of Loan & Collateral Data Management systems and high-volume ETL pipelines that process sensitive financial data.
- **Business Alignment & Stakeholder Management:** Managed diverse stakeholders - Trading Desks, Asset Managers, Operations, Controllers - defining roadmaps, managing budgets, and aligning engineering priorities with commercial and regulatory needs.
- **Data Integrity & Risk Mitigation:** Drove operational resilience and compliance by delivering high-impact solutions, including data exception and review platforms. These systems prevented potential regulatory fines and mitigated operational risk while ensuring the accuracy and integrity of data for critical regulatory reporting, such as FRY-14, under strict fed timelines.
- **Technology & Vendor Integration:** Led technical evaluation and successful onboarding of major NoSQL and NewSQL databases (MongoDB, SingleStore). Managed relationships across internal Data Infrastructure teams and external contingent worker vendors.

Infosys Technologies Limited

Systems Engineer | Sep 2008 – Aug 2010 | Bangalore, India

- Developed Data Warehouse reporting and analysis systems for Telecommunication and Insurance clients.

Skills

Regulatory & Risk Acumen: FRY-14, DF-943, GDPR, SOX, SOC 2, Data Governance, Cloud Security, Tech Risk Management

Cloud & Data Platforms: AWS (EC2, EKS, S3), Kubernetes, Docker, Microservices, Terraform, Databricks, ArgoCD

Data Processing & Storage: Spark, Kafka, Ignite, PostgreSQL, MongoDB/Atlas, Singlestore, Sybase IQ, Redis

SDLC & Observability: Agile (Scrum), Jira, Git, CI/CD (Jenkins, Gitlab/Github Actions), Prometheus, Grafana, Datadog, Sentry, Snyk

Enterprise & Methodology: ServiceNow, Salesforce, PR/FAQ, V2MOM, Confluence, Architectural Design Review

Financial Products: Retail & Wholesale Lending, Asset Backed Securities, Secondary Markets, Asset Management

Languages/Frameworks: Java, Python, JavaScript, SQL, Shell, React, Node.js, Dropwizard, Flask

Education

M.S., Telecommunications Engineering and Management | University of Maryland, College Park, MD | Dec 2012

B.E., Telecommunications Engineering | Visvesvaraya Technological University, Bangalore, India | Jul 2008
